TECHNICAL EXPERIENCE

Software Developer | Poly-Vinyl Pests! | IDX Legends | College Capstone

Burlington, VT

Jan – May 2025

- Core AI and graphics programmer of top down player-versus-player boss rush action shooter.
- 500+ Wishlists on Steam in the first week, 91% positive reviews and built a 100+ member Discord community.
- Developed an asynchronous pathfinding framework using Unity NavMesh for boss encounters, enabling real-time trajectory generation that reduced CPU overhead while maintaining high-fidelity agent responsiveness.
- Designed and implemented the final level of the game which included custom tower defense mechanics and a caustics rendering tool for the towers.
- Followed strict software development patterns to build the caustics tool and AI framework for multiple use cases.

Product Owner and Systems Engineer | 12 Planet Revolution | Team Won

Burlington, VT

Aug – Nov 2024

- Lead the development of a 3D prison escape action game including managing an 8-person development team.
- Designed core player gameplay UI and built the core systems including the camera movement using C# in Unity.
- Implemented high-performance custom enemy AI using smart resource management to reduce memory footprint.

Gameplay Engineer | ChillJoy | Workhorse Studios

Burlington, VT

Jan – May 2024

- Designed and built core gameplay mechanics for 3rd-person action shooter including six unique firing modes.
- Created and maintained technical documentation to streamline team collaboration and ensure alignment on core mechanics and technologies.
